

Powermag

Power Filter Magnet

Enhances Performance >> Thru Prefiltration

**PROTECT YOUR ENGINE WITH
CUTTING EDGE TECHNOLOGY !!**

Power Filter Magnet technology is based on:

Motor Racing

Aerospace industry

Heavy Industrial Machineries

NOW available to YOU!!

Powermag Power Filter Magnet

Enhances Performance >> Thru Prefiltration

THE BENEFITS

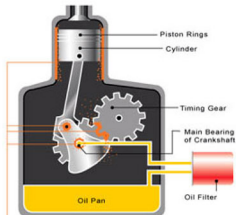

- 1) Magnetically removes ferrous particles.
- 2) Keeps our oil cleaner.
- 3) Reduces abrasion.
- 4) Maintenance free.
- 5) Protects your engine.
- 6) Universal sized.
- 7) No special tools/training required.
- 8) Inexpensive highly effective solution.

Power Filter Magnet's patented design can be adjusted to fit Oil Filters of different sizes.

THE PROBLEM

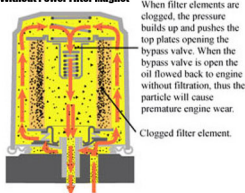

- 1) People don't service on time.
- 2) Imitation & replacement grade filter:
 - Low quality, leakage
 - Made by backyard industry.
 - filter not glued to ends, resulting in unfiltered oil bypassing.
 - Rampant in the market & is causing slow damage to car engine without the owners knowledge.
- 3) Heavy ferrous contamination happens during new car break-in. Low grade oil used for vehicle break-in by manufacturers.
- 4) Escalating price on car parts & labour cost.

Metal particles are produced due to friction between moving parts of the engine.

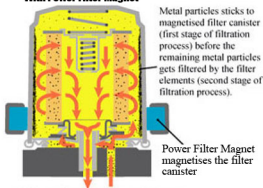

How Ferrous Particle Enter Lubrication System

Without Power Filter Magnet

Unfiltered oil goes in from the sides and comes out from centre of oil filter unfiltered.

With Power Filter Magnet

Unfiltered oil goes in from the sides and filtered oil comes out from centre of oil filter.

THE SOLUTION

- ▶ Prolong engine life by reducing wear & tear.
- ▶ Technology from the Aerospace Industry & Motorsports. Using the FPA concept to enhance and multiply the efficiency of your vehicles standard oil filtration system.
- ▶ FPA (Ferrous Particle Attractor) Traps ferrous particle before it reaches filter element by magnetising the oil filter canister.
- ▶ Universal Size. One size fits most oil filter
- ▶ Scientifically engineered for maximum protection of your engine.
